

Don't use your brain in the lab

Health & safety

- Put electricity cables in the water and on the wet floor
- Use saws and electrical tools on a wiggly chair
- Apply powders and clean the dusty flume without water and without a dust mask
- Use undiluted chemicals and powders without reading the safety sheet.

Equipment & tools

- Leave tools in wet sand so they get nicely oxidized and rotten
- Never close camera lenses and laptops against dust and moisture

Cleaning

- Cleaning the lab is unnecessary
- Waste bins can be spread around
- Leave your food and crumbs lying around; the department enjoys the smell

Support

- Technicians love to work in a messy place
- Technicians have X-ray eyes to find tools and other materials
- Never say '*please*' or '*thank you*' to a technician; this causes unnecessary aggression
